

**EDITORIAL**

Volume 6 of *Revista Mexicana de Ingeniería Química*, corresponding to 2007, is complete with the publication of this issue, number 3. We would like to share with our readers and colleagues some very interesting aspects that occurred during the year.

Our journal has been consistently growing and we have witnessed how the number of manuscripts submitted for evaluation has been gradually increasing. Thus, the publication of 42 original research papers in different fields of chemical engineering and related disciplines distributed within three issues was accomplished. This was possible mostly because of the effort and collaboration of dozens of national and international researchers, who submitted their results and to those who evaluated the submitted manuscripts with high professionalism.

It is important to mention that the journal has increased its visibility, especially electronically by participating in various indexes, which can be consulted via internet. Periódica, Latindex, Redalyc and Chemical Abstracts indexes have become an important window for our journal. We plan to be included in other indexes during 2008 and to increase the diffusion of RMIQ.

Finally, last march we applied to CONACYT for renewal and the Journals committee has informed that RMIQ will continue to belong to the CONACYT Index of Mexican Journals of Scientific and Technological Research (Índice de Revistas Mexicanas de Investigación Científica y Tecnológica del CONACYT) for the period 2007-2012.

We hope the journal will continue its growth and consolidation, which can be accomplished with the participation of a larger number of colleagues and the dedication of the Editorial Committee and the Editors.

Sincerely

Jesús Alberto Ochoa-Tapia    Jaime Vernon-Carter    Tomás Viveros-García
