Said:

### Results

*New records of Echinococcus multilocularis in the Nearctic.* We include here a new record of a specimen of *E. multilocularis* found in the liver of an individual of *M. ochrogaster* collected by Gregory E. Glass in a grassy area in Mount Pleasant Park, Baltimore, Maryland in August, 1985. The parasite cyst in the liver was identified as *E. multilocularis* by Everett L. Schiller (see Methods, above). This represents the first record of *E. multilocularis* for Maryland and the most eastern record for the species in North America.

*New records of Echinococcus multilocularis in the Nearctic.* We include here a new record of a specimen of *E. multilocularis* found in the liver of an individual of *M. pennsylvanicus* collected by Gregory E. Glass in a grassy area in Mount Pleasant Park, Baltimore, Maryland in August, 1985. The parasite cyst in the liver was identified as *E. multilocularis* by Everett L. Schiller (see Methods, above). This represents the first record of *E. multilocularis* for Maryland and the most eastern record for the species in North America.
